

Sonny,

“When this pandemic kicked off, we had only surgical mask, then N95s. It was a surprise to everyone when it hit, there were no supplies and we were only allowed one N95 mask per pilot to be stored in a paper bag when not in use. We saved it only for the known positive patients because of how fragile it became after a few months. We would sweat through them or break the rubber bands that cut into our ears during flight. At night the exhaled breath would fog the NVGS and the restriction of breathing would make me light headed after a few hours. Especially if we were called to a scene flight and the physical exertion would cause you to breath harder.

I bought my own Honeywell but it was almost impossible to communicate while wearing it. When I would yell to be heard it increased the stress level during the flight.

Then I found Tiger Performance. The mask is the highest quality, and purges the hot air away from my face. The bands are wide and thin providing a tight seal without pressure point hot spots under my helmet. I fit tested it twice with the hood test and it performs just like an N95. But most importantly the communication is crystal clear! Now I can keep the crew environment calm and communicate effortlessly with ATC. I selected the splitter option so I can transition between boom mike and mask mike with just the flip of a switch. Because of its rubber housing I can wipe it down inside and out with sterilization wipes in between flights. This ensures maximum protection from cross contamination.

My average flight is 40 to 60 minutes of flight time. Average temperature ranges between 70 and 100 degrees. I have zero effort inhaling or exhaling with the mask and my face stays cool. I can't thank you and your team enough! This is the best piece of PPE I own and I trust it completely to keep me safe during COVID flights.”

Sincerely,

Emmanuel Vero

“The communication is amazing in cutting out wind and rotor noise for the hoist operator and rescuer.”

Alex Keller, Pilot
Ventura County Aviation Unit

“Hi Tiger Performance,

It is Barry Chamberlain RN with CareFlight of the Rockies in Grand Junction Colorado. We have many crew members now using your 1/2 mask respirator with the microphone installed. Tonight a fixed wing crew brought in a COVID 19 patient and they were using their masks as well as their voice amplifiers and I can tell you they worked really well! It was easy to hear the crew speaking in a normal voice and being able to communicate effectively with the ground ambulance crew picking them up for their trip to the hospital from the airport. The voice amplifiers were fantastic to see in action and will make these transports much more safe and efficient! Good work and thanks for a great product!”

Sincerely,

Barry
Careflight of the Rockies Education Coordinator

“Sonny!

That is so very gracious of you THANK YOU. I am happy to help in anyway with your endeavors with Honeywell. I am so glad you are reaching out to support all of us. I am the first pilot in the company but the boss loves it and now is just looking to allocate funds. I met with another pilot from a different company and all he had was the N95. I told him about Tiger Performance and will continue to do so to everyone I meet. If you need me to talk to anyone that would help your company feel free to reach out.

Thank you again for your extraordinary offer, I am so very very grateful!”
